Neoplasia Outline

- Tumor nomenclature
- Tumor characteristics
- Epidemiology
  - Cancer incidence
  - Environmental variables
  - Age
  - Heredity

Neoplasia III: Cancer Epidemiology
Kristine Krafts, M.D.

Cancer Incidence

- Roughly 1.5 million new cases of cancer every year
- >500,000 deaths from cancer every year
- Cancer is 2nd leading cause of death (after heart disease)
- Most common cancers
  - Men: Prostate
  - Women: Breast
- Deadliest cancers
  - Men: Lung
  - Women: Lung

Recent Changes in Death Rates

Decreased death rates:
- Cervical cancer (pap smears)
- Colon cancer (earlier detection)
- Breast cancer (earlier detection)
- Lung cancer in men (less smokers)
- Some types of leukemia (new treatment)

Increased death rates:
- Lung cancer in women (more smokers)
Neoplasia Outline

- Tumor nomenclature
- Tumor characteristics
- Epidemiology
  - Cancer incidence
  - Environmental variables

Some Stats

- Breast cancer death rate in US is 5x that in Japan!
- Stomach cancer death rate in Japan is 7x that in US!
- Liver cancer infrequent in US, common in Africa.
- Probably due to environmental (not hereditary) factors.
- Most sporadic cancers are caused by environmental factors.

Environmental Carcinogens

- Sunlight: skin cancer
- Smoking: lung cancer
- Alcohol: liver, breast cancers
- HPV: cervical carcinoma

Occupational carcinogens

<table>

</table>

Neoplasia Outline

- Tumor nomenclature
- Tumor characteristics
- Epidemiology
  - Cancer incidence
  - Environmental variables
- Age

Age

- Cancer is more frequent at the two extremes of age.
- Elderly
  - Frequency of cancer increases with age
  - Most cancer deaths occur between 55-75
- Children
  - 10% of all childhood deaths
  - Leukemia/lymphoma, CNS tumors, sarcoma
Neoplasia Outline

- Tumor nomenclature
- Tumor characteristics
- Epidemiology
  - Cancer incidence
  - Environmental variables
  - Age
  - Heredity

Three Types of Hereditary Cancer

- Inherited cancer syndromes
- Familial cancers
- Syndromes of defective DNA repair

Three Types of Hereditary Cancer

- Inherited cancer syndromes
  - Dominantly inherited
  - Retinoblastoma
  - Familial polyposis coli

Three Types of Hereditary Cancer

- Inherited cancer syndromes
  - Familial cancers
    - Most common sporadic cancers have familial forms too
    - Breast, colon, ovary, brain
    - Occur earlier, are often deadlier

Three Types of Hereditary Cancer

- Inherited cancer syndromes
  - Familial cancers
    - Syndromes of defective DNA repair
      - Xeroderma pigmentosum
